INSPACION

DESIGN, EXPERIENCE, AND DECIDE WITH INSPACION

Maximum efficiency through virtual inspections and integrated planning

Requirements defined collaboratively with the users

Users involved intuitively in the planning process

Improved planning security thanks to lower risk

Planning decisions can be made without delay

Area planning actively integrated into

the planning process

Simple integration of the planning data with BIM/IFC

> Do you know what advantages virtual planning support offers your company?

Does your planning methodology support efficient user engagement?

inspire them with regard to virtual planning methods?

- Would you like to receive detailed information on requirements for successful planning in all project phases?
- Do you use 3-D planning and take advantage of all benefits this planning methodology has to offer?
 What operational and structural requirements do you have for your new construction or
- renovation project?
 > How could your operating processes be taken into account in planning, both efficiently and
- without loss of information?
 > How do you involve your employees across all professional groups? And how can you

We assist you in planning your projects: Make use of our experience and expertise for your success with INSPACION.

How it works?

INSPACION offers a virtual reality solution supporting the design and optimization of spaces and operational processes. A virtual image of the planning allows the users not only to interact and freely move within the space they have designed but also to move objects around. This enables them to check their processes and actual space requirements. Together with the planning team, it is then possible to derive optimizations and reduce construction and operating costs.

Your path to planning your building innovatively and efficiently

Drees & Sommer supports you from the start of a project until its successful completion. Firstly, we work with you to define the precise goal of your INSPACION journey in the virtual world, and we establish the exact scope and requirements profile. Our experts offer you comprehensive expertise in virtual reality (VR) throughout the entire process. If required, they can also support you in Building Information Modeling (BIM) through assistance with user coordination.

This is how we do it:

1. VR strategy consulting

We work with you to derive the VR strategy from your usage concept and define the milestones on he path to its implementation.

2. Implementation We use a structure

We use a structured procedure to accompany the introduction to the virtual world into the ongoing planning process.

3. Requirements management and user engagement

We organize, structure, or expand the contents of your existing requirement documents by:

- Conducting workshops to involve the users in the entire planning process
 Recording the requirements in a
- comprehensible manner in the digital planning process

4. Operational Management

When necessary, we can facilitate and develop future operating processes in VR together with you. We can also test them interactively right away, and adapt them directly.

5. Change managementWe take a down-to-eart

We take a down-to-earth and energizing approach to informing your employees about the new possibilities in the future spatial structure. Virtual reality creates a common understanding between all parties involved.

6. Project management

We support your optimized project development with efficient coordination processes and the resulting time savings.

7. Project support and optimized planning procedures

The use of virtual reality enables a better communication between users and planners. So planning processes can be improved and the quality of a project optimized. This results in a significantly enhanced project quality.

8. Smooth commissioning

Virtual reality enables the textual and planning processes to be experienced at an early stage. This facilitates the subsequent commissioning processes.
