1984

2010

Shocks and stresses - impacting urban living?

What have we learned? How have we responded?

- We are extremely vulnerable and have no plan B
- We are leaning on compact living, mass transit, mega-cities, instant global accessibility - but the smallest of all germs put it all to a stop.

The Experience
We were told not to crowd in mass transit

But what are the consequences?

We were told not to crowd in public realm

What will the new normal be?

We are at the brink of fundamental transitions

Leap frog communication shift

- 5G allowing real IoT
- Can leverage resilient and flexible living
- Autonomous healthy mobility

Climate change is driving changes

- New urban planning conditions
- Adaptation and mitigation is key
- More mobility - less traffic

Economic transitions

- Shared economy
- Transport – from individual ownership to subscription to mobility services
- Remote working
- Less demand for office space

Corona crisis showing profound vulnerability

- Transition in personal awareness
- Consequences of crowding
- Transition readiness
- New location criteria's for families

Now is the time to rethink – now is time to create resilience

Best practice to next practice

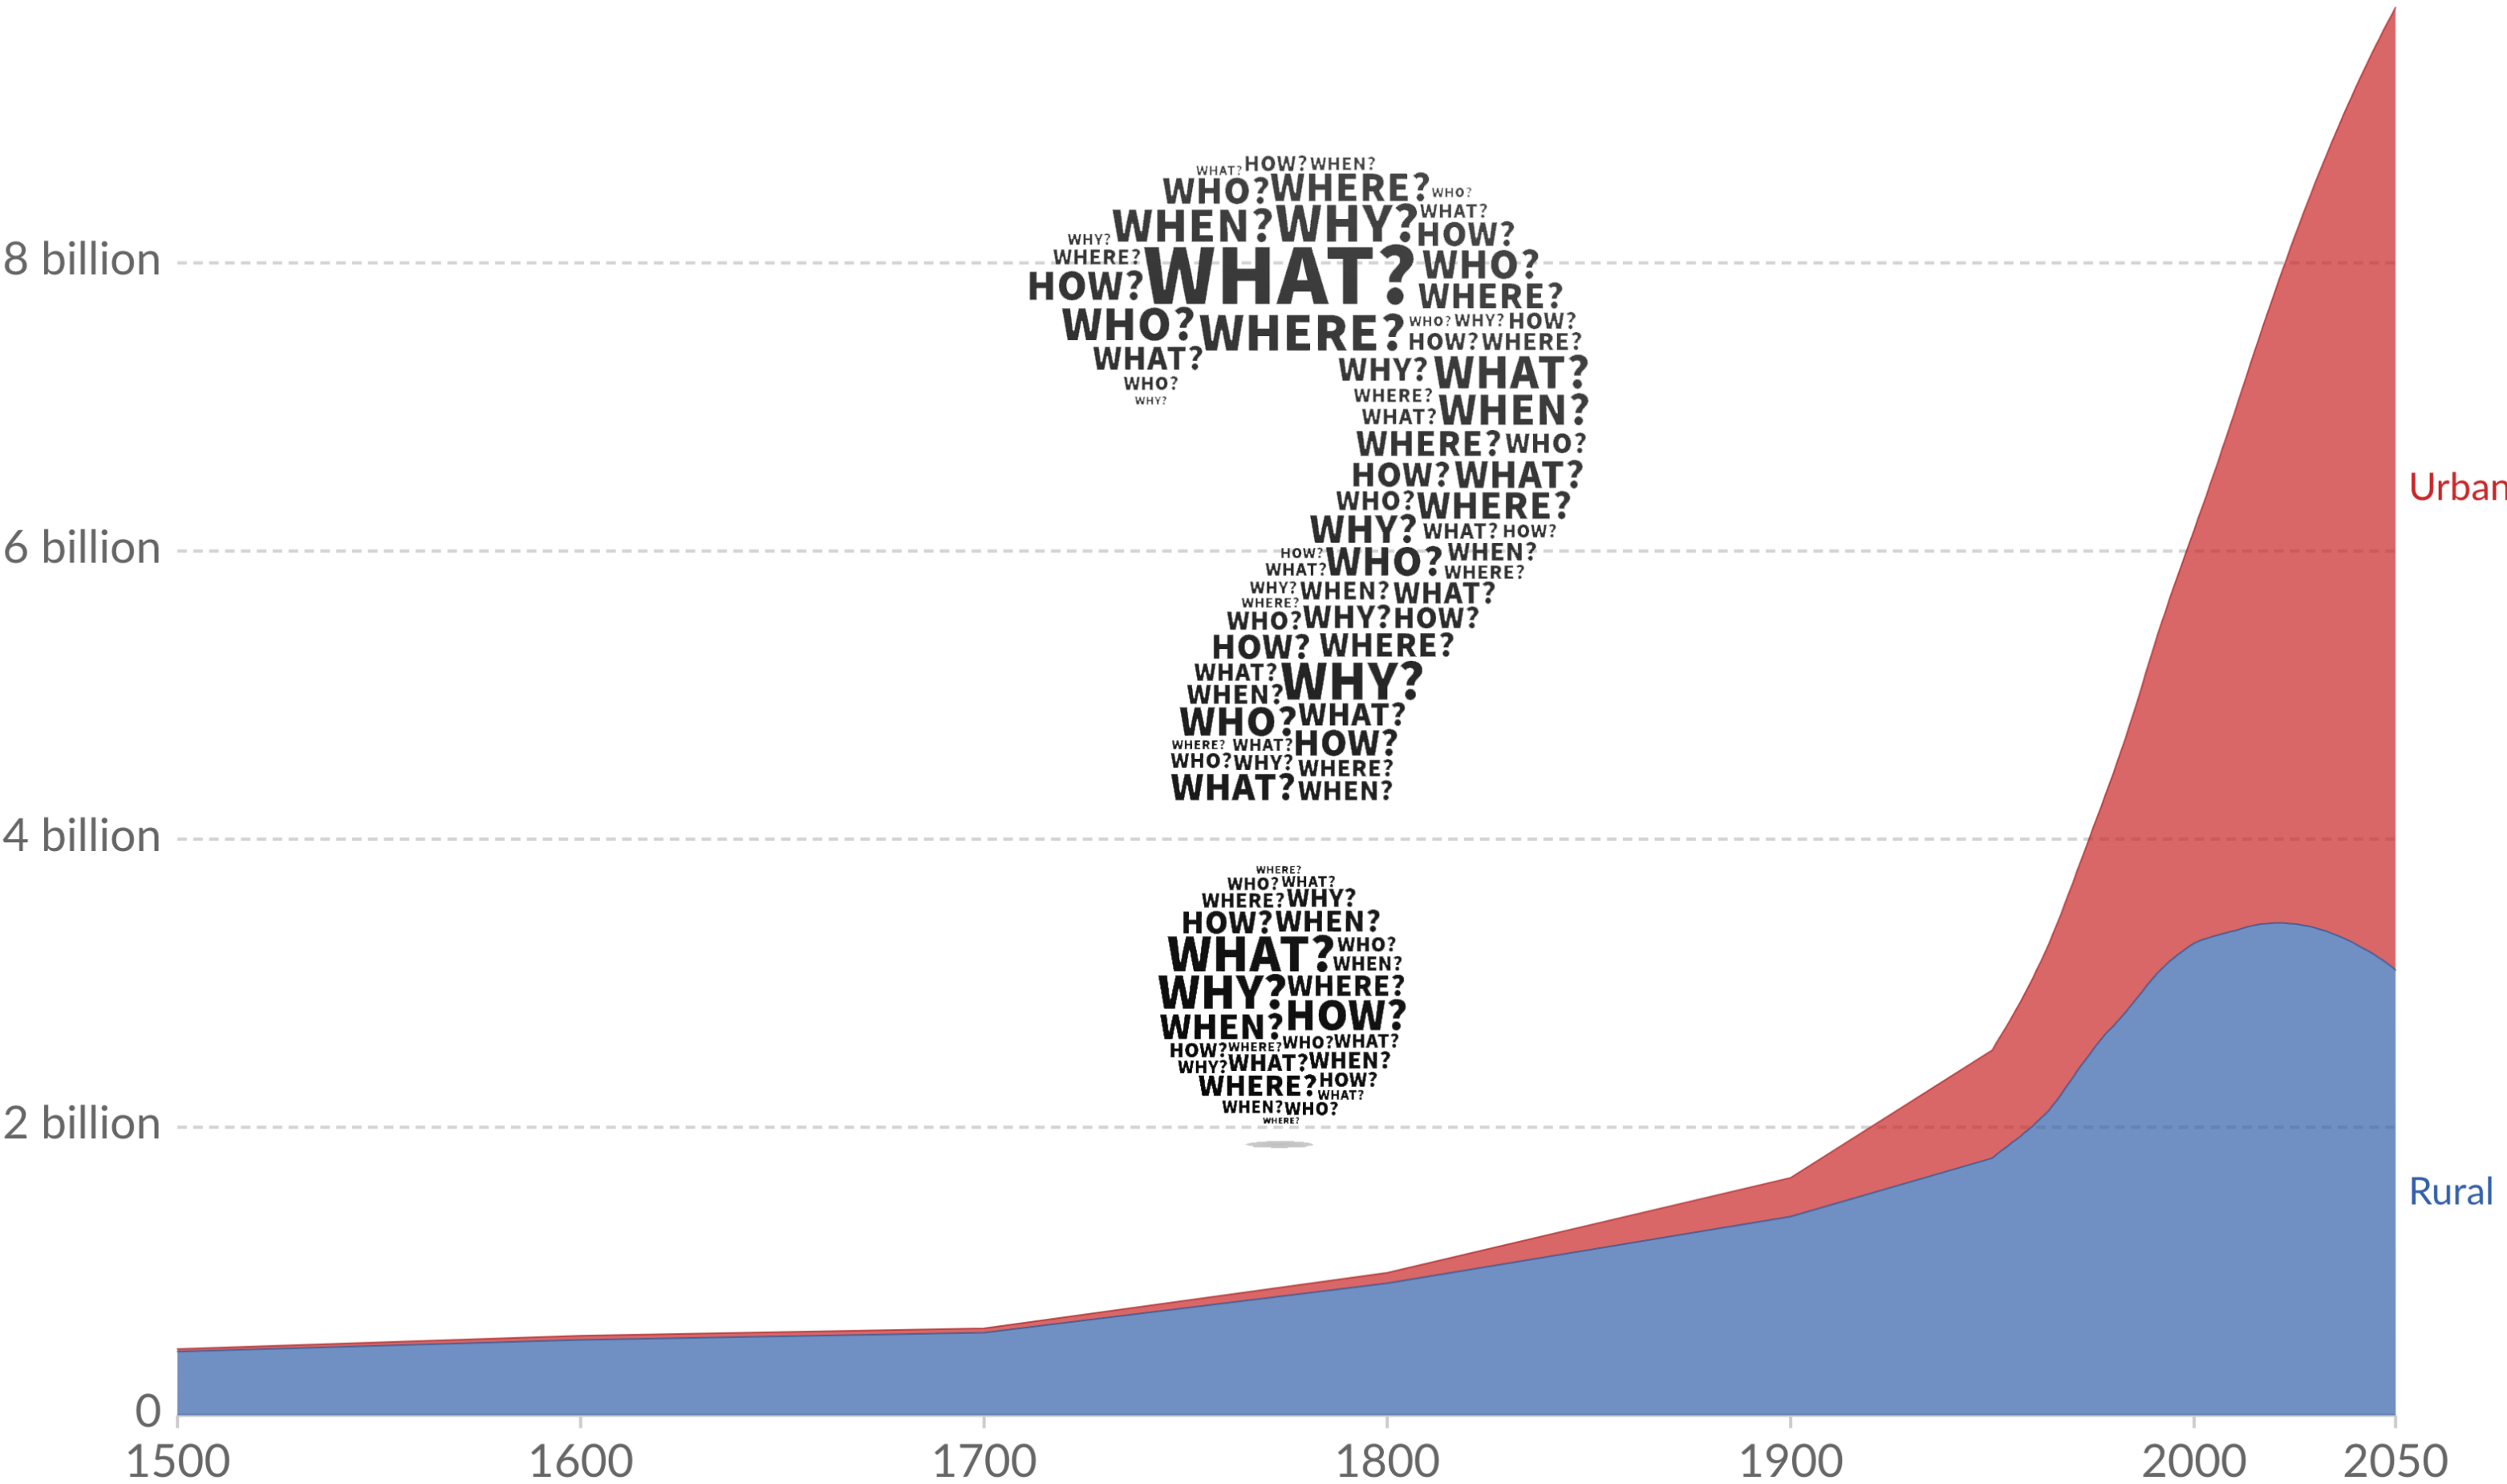

- Best practice is retrospective and more of the same
- Cities last for the next 100s of years and must be resilient to conditional changes, shocks, and stresses
- Best practices don't consider economic crisis, health crisis, terror, climate changes, fluctuating scenarios, etc.
- Best practice is at large system centric
- **Next practice must be human/life centric and resilient**

Tools for life centric design:

- Sustainable and livable
- Smart
- Resilient
- Flexible
- Cultural
- Inclusive
- Diverse
- Healthy
- Accessible
- And.....

Urban and rural population projected to 2050, World, 1500 to 2050

Total urban and rural population, given as estimates to 2016, and UN projections to 2050. Projections are based on the UN World Urbanization Prospects and its median fertility scenario.

Source: OWID based on UN World Urbanization Prospects 2018 and historical sources (see Sources)

A diagram illustrating the iceberg metaphor. A light blue, jagged shape representing the visible part of an iceberg is positioned above a horizontal line. Below this line, a much larger, light blue shape representing the submerged part of the iceberg is visible. The background is split horizontally: the top half is white, and the bottom half is a solid grey color. The text "In plain sight" is centered within the visible part of the iceberg.

In plain sight

New Typology

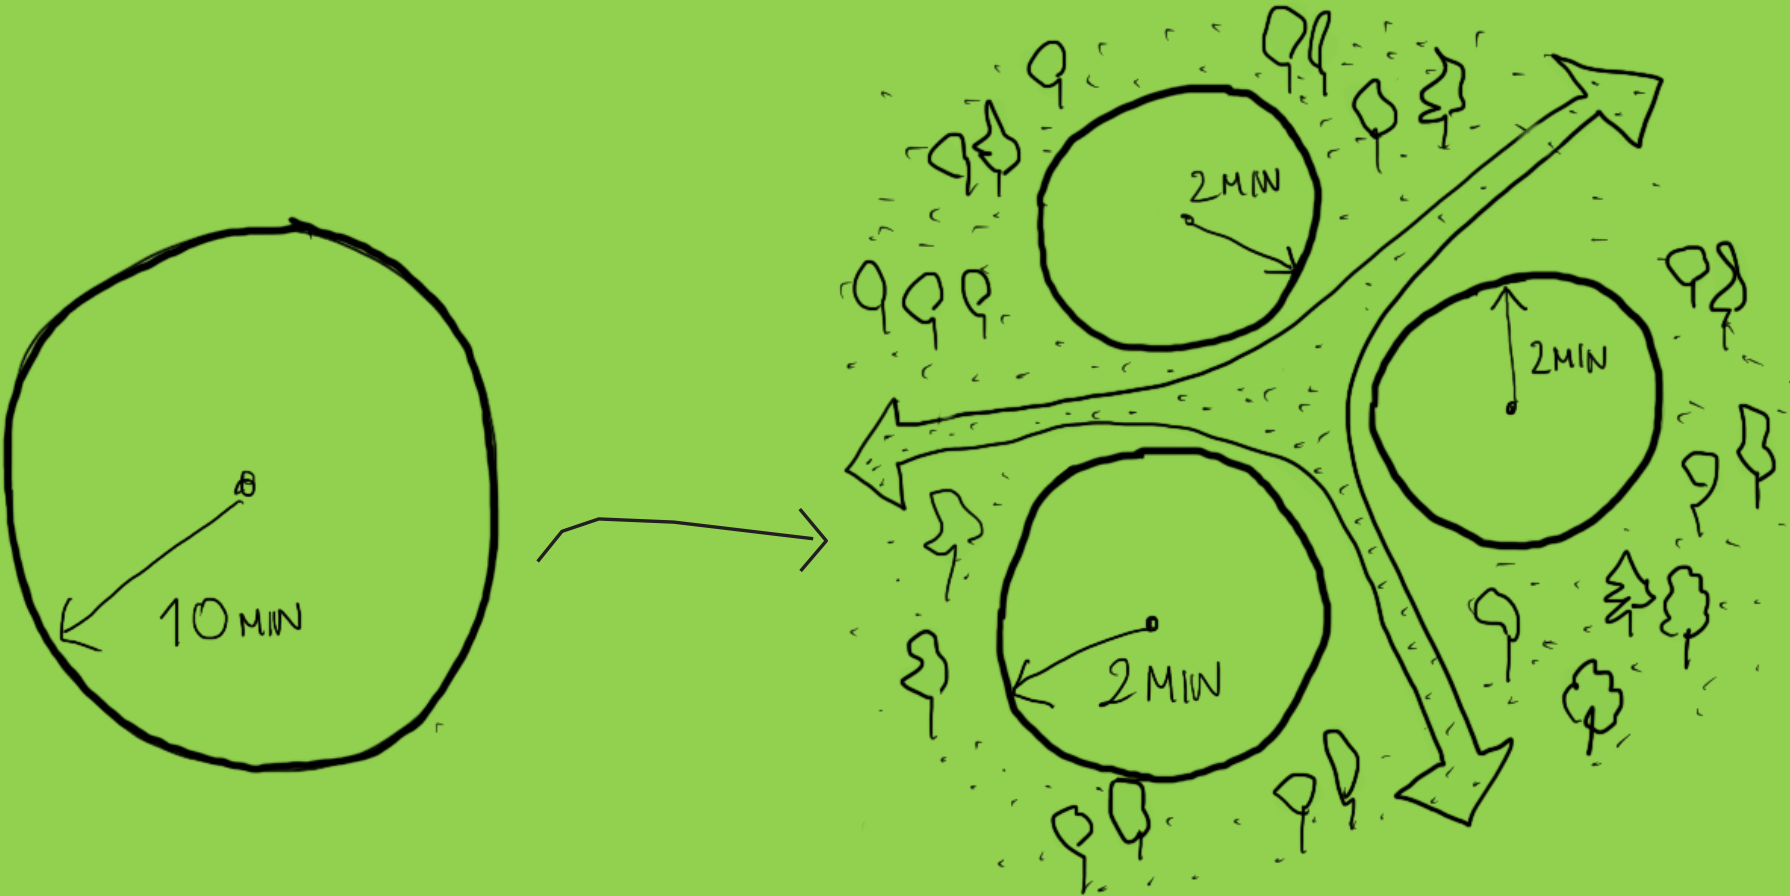

Celebrating diversity

One district – 3 neighborhoods

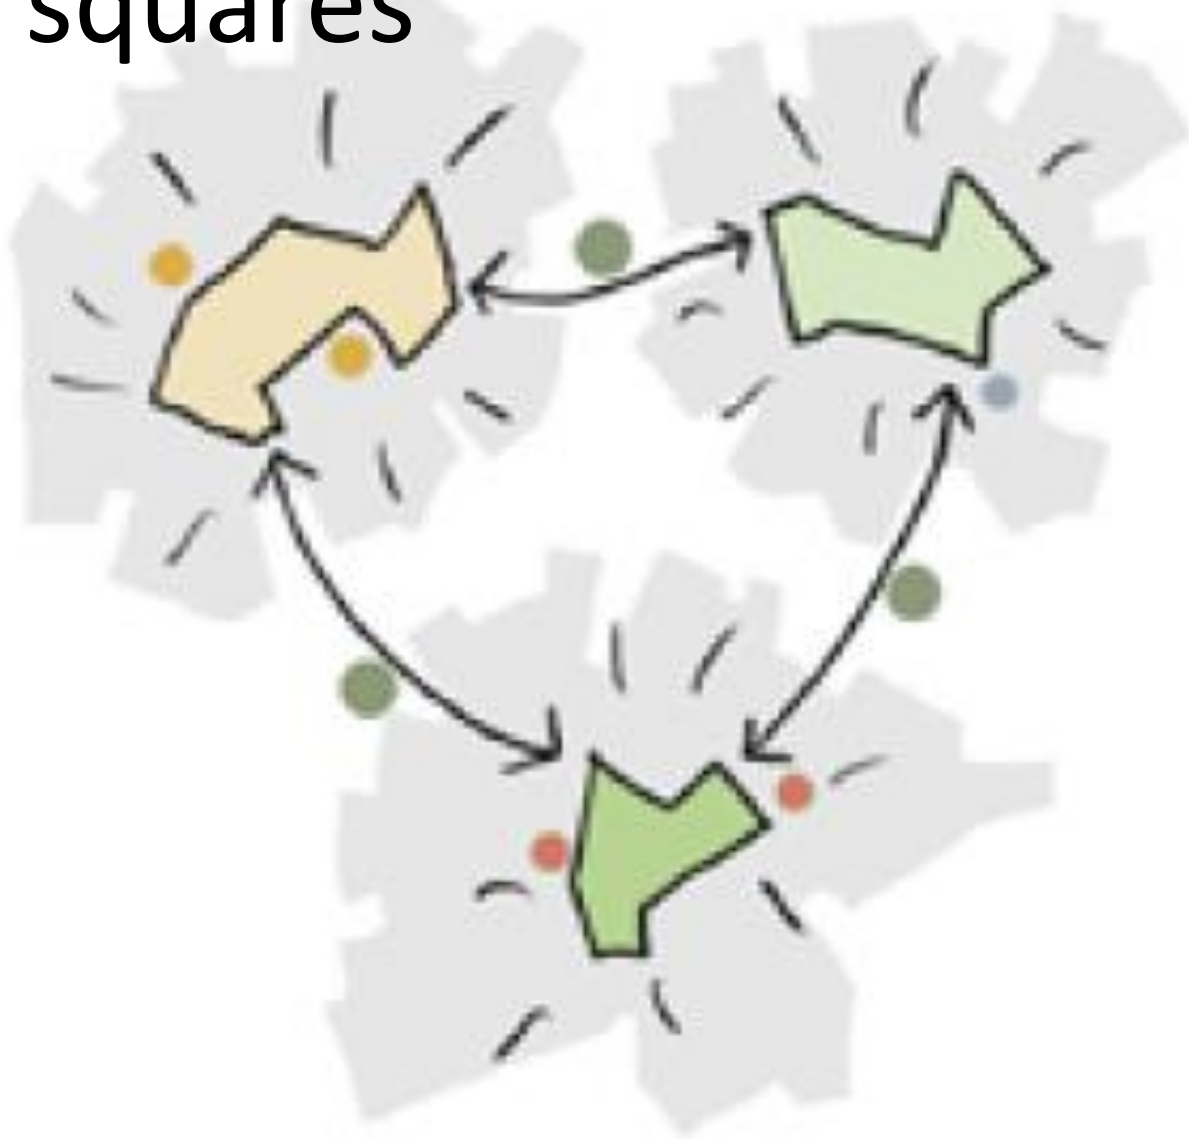

Ca. 2.000 residential units = 5.000 population

3 neighborhoods – 2,000
units
5,000 residents

Interaction squares

Nabolagspladser

Centralt i hvert nabolag finder man større byrumspadser, hvor store forsamlinger kan mødes.

Community squares

Lokalpladser

På grænsen mellem Fælleden og bebyggelse er der mindre lokalpladser, hvor gadens beboere samles.

Local and private squares

Gårdrum og gade

I gårdrummet kommer naturen helt tæt på og giver mulighed for fællesskabsdannende aktiviteter med naturen i fokus. Her er der mere roligt og privat

Det nære fællesskab

Langs facader og ved indgangspartier er der små opholdsmuligheder, som skaber ramme om uformelle møder mellem naboer.

An aerial photograph of a modern city with a network of blue lines and dots overlaid on it, representing smart technology. The city features green spaces, roads, and buildings. The text is overlaid on the image.

SMART TECHNOLOGIES ARE ENABLERS
NO TECHNOLOGY IS SMART IN ITSELF

*“A truly SMART society is about
people, future, vision, and
planning”*

This is “Build Back Smarter”

THANK YOU
